

01 type distribution box

Article Overview

Distribution boxes (DB boxes) come in various types, including single-phase, three-phase, surface-mounted, flush-mounted, pole-mounted, lighting, power, and control distribution boxes, each designed for specific electrical applications.

Overview of Distribution Boxes

A distribution box (DB box) is a central hub that safely distributes electrical power from a main supply to multiple circuits. It houses protective devices such as circuit breakers, fuses, and bus bars, ensuring safety and preventing overloads or short circuits in residential, commercial, and industrial settings. DB boxes can be made from materials like polycarbonate, ASA, or stainless steel, and smart versions may include energy monitoring and communication modules.

Common Types of Distribution Boxes

- Single-Phase DB Boxes – Designed for residential properties or small commercial loads, handling lower power requirements.
- Three-Phase DB Boxes – Used in industrial or large commercial facilities requiring higher power capacity.
- Surface-Mounted DB Boxes – Installed directly on walls, suitable for retrofits and industrial environments.
- Flush-Mounted DB Boxes – Embedded into walls for a clean, aesthetic appearance, commonly used in residential and commercial buildings.
- Pole-Mounted DB Boxes – Designed for outdoor applications such as street lighting and utility distribution.
