

100Mbps fiber optic connection to 1Gigabit router

Article Overview

A 100Mbps fiber optic connection can be effectively supported by a gigabit router, offering stable wired and wireless performance for typical home or small business use.

Router Suitability for 100Mbps Fiber

A 100Mbps fiber connection does not require the latest Wi-Fi 7 or multi-gig routers to achieve full speed. Most gigabit routers with 1 Gbps LAN/WAN ports can easily handle 100Mbps internet, providing headroom for multiple devices and future upgrades . These routers ensure that your network is not the bottleneck, even if several devices are connected simultaneously.

Recommended Router Features

When selecting a router for 100Mbps fiber, consider the following:

- Gigabit Ethernet Ports: Ensure the router has at least 4 LAN ports and 1 WAN port supporting 1 Gbps for wired connections .
- Wi-Fi Standard: Wi-Fi 5 (802.11ac) is sufficient for 100Mbps, but Wi-Fi 6 or 6E provides better coverage, lower latency, and improved performance for multiple devices .
- Coverage: Choose a router that matches your home size. For small to medium homes, a single router is sufficient; for larger homes, consider mesh systems like the Orbi 770 Series .
