

2015 Huawei Core Switch

Article Overview

Huawei's 2015 core switches, such as the S12700 and S9300 series, were high-performance, scalable, and resilient switches designed for enterprise and data center networks.

Key Models and Features

- Huawei S12700 Series (TAN Series): Designed for intelligent, scalable enterprise networks, the S12700 offered ultra-broadband services, integration of wired, optical, and wireless technologies, and support for CloudFabric architecture. It was ideal for enterprise backbones, digital transformation initiatives, and high-capacity campus networks (Huawei Alibaba listing) .
- Huawei S9300 Series (ING Series): Targeted medium to large enterprises, combining high-speed switching with intelligent network management. It featured energy-efficient cooling and robust performance for mission-critical applications, suitable for enterprise core layers and service provider edge/core networks .
- CloudEngine Series (CE12800, CE8800, CE7800): Although introduced slightly later, these data center switches represented Huawei's high-end core switch architecture, offering massive throughput (up to 160 Tbit/s for CE12800) and high-density line-speed ports, designed for next-generation data centers and high-end campus networks .
