

2023 Fiber Optic Cable Prices

Article Overview

In 2023, fiber optic cable deployment costs ranged from \$4 to \$24 per foot depending on installation type, with material costs influenced by rising prices of silica, helium, and energy.

Deployment Costs

Fiber optic cable installation costs vary significantly based on whether the deployment is underground or aerial. In the U.S., underground deployment costs ranged from \$11 to \$24 per foot, with a median of \$16.25 per foot, while aerial deployment ranged from \$4 to \$9 per foot, with a median of \$6.49 per foot. Costs are heavily influenced by labor, which accounted for 50-90% of total expenses, leaving materials to contribute 10-50%. The average split was 73% labor and 27% materials for underground, and 67% labor and 33% materials for aerial construction. Population density and terrain also affected costs. Urban areas had the highest median underground cost at \$23.25 per foot, nearly double that of extremely rural areas at \$12.50 per foot. Aerial deployments followed a similar trend, with urban areas at \$6.54 per foot and rural areas at \$5.00 per foot.

Material and Input Costs

The price of fiber optic cables themselves increased in 2023 due to rising costs of key inputs such as silicon tetrachloride, helium, and energy. Helium is critical for cooling the fragile optical fibers during manufacturing, and global supply constraints have contributed to higher production costs. These input cost increases were compounded by strong global demand for fiber, particularly for data centers, 5G networks, and IoT applications.
