

60kW Distribution Box Standard

Article Overview

A 60kW distribution box typically handles 120/208V 3-phase power with 200A input, multiple circuit breakers, and outputs designed for safe distribution to connected equipment.

Overview

A 60kW distribution box (or PDU) is designed to safely distribute electrical power from a high-capacity source to multiple devices or sub-distribution units. These units are commonly used in industrial, commercial, and military applications, including base camps, data centers, and expeditionary setups .

Electrical Specifications

- Input Voltage: Typically 120/208 VAC, 3-phase . Some units may support higher voltages like 600V/208V for specialized applications .
- Input Current: Often rated at 200A, using a 4-pole, 5-wire connector compliant with MIL-C-22992 standards for military units .
- Output Channels: Multiple outputs, commonly four 60A 3-phase receptacles or 18 single-phase 16A outputs depending on the design .
- Single Output Power: Usually $\leq 3.5\text{kW}$ per channel for modular distribution .

Circuit Protection

- Main Breaker: Protects the entire unit, e.g., 125A main breaker .
- Branch Circuit Breakers: Thermal magnetic type, with 3-pole molded-case breakers for 3-phase outputs and single-pole breakers for 1-phase outputs .
