

Add cable management bracket

Article Overview

Installing a cable management bracket organizes cables efficiently and ensures proper routing in server racks or network equipment.

Selecting the Bracket

Choose a cable management bracket that matches your rack depth and type. For example, wider bars are used in shorter racks (like 7014-T42), while shorter bars fit deeper racks (like 7965-S42) . Ensure the rack has sufficient clearance and no conflicting hardware, such as earthquake kits or additional customer equipment, which may prevent installation .

Preparing the Rack

- Identify the mounting location on the rack flange.
- Use a sticker or pen to mark the screw positions on the inside of the rack flange .
- Confirm that the bracket aligns with the marked locations before attaching.

Assembling the Bracket

- Attach the cable management bar to the bracket using the provided M3 screws .
- For vertical or horizontal managers, ensure the D-rings, bend radius fingers, or brush strips are properly oriented for cable routing .

Installing the Bracket

- Hold one side of the assembled bracket against the rack flange at the rear of the rack.
