

Aerial Optical Cable Fixing Clip

Article Overview

Aerial optical cable fixing clips are specialized clamps and brackets designed to secure fiber optic cables on poles, walls, or aerial routes, ensuring stable alignment and protection against environmental stress.

Purpose and Applications

Aerial optical cable fixing clips are used to secure and stabilize fiber optic drop cables in outdoor environments, particularly in FTTH (fiber-to-the-home) networks. They prevent sagging, maintain proper cable alignment, and reduce strain on the cable, which is critical for maintaining signal integrity over time (HOLIGHT) . These clips are suitable for pole-mounted, wall-mounted, or aerial installations, and are commonly used in residential, commercial, and industrial fiber optic projects (HOLIGHT) .

Types and Materials

- **Fiber Tension Clamps:** Designed to hold cables under tension without damaging the fiber.
- **Stainless Steel Drop Wire Clamps:** Offer maximum durability and corrosion resistance for harsh outdoor conditions.
- **Plastic or Nylon-Based Clips:** Lightweight and cost-effective, suitable for indoor or less demanding outdoor applications (HOLIGHT) . Stainless steel bandings and buckles are also used for heavier or industrial applications, providing high breaking strength and environmental stability for aerial transmission lines and outdoor passive optical networks (JERA LINE) .

Installation and Compatibility
