

African electrical distribution boxes surface and concealed

Article Overview

Electrical distribution boxes in Africa are available in both surface-mounted and flush-mounted designs, with options in steel, PVC, and polyester, meeting local standards and IP ratings for residential, commercial, and industrial use.

Types of Distribution Boxes

Surface-Mounted Boxes: These boxes are installed on the wall surface and are easier to access for maintenance. They are commonly used in residential and commercial settings where wall recessing is not feasible. For example, Schneider Electric's Resi9 MP series offers surface-mounted enclosures with 1 to 3 rows of modules, IP40 protection, and translucent doors, suitable for 6 to 36 modules .

Flush-Mounted (Concealed) Boxes: Flush-mounted boxes are recessed into the wall, providing a cleaner aesthetic and saving space. They are ideal for modern residential and office installations. The same Resi9 MP series provides flush-mounted options with 1 to 2 rows of modules, maintaining IP40 protection and including earth and neutral terminal blocks .

Materials and Construction

- **Mild Steel and Stainless Steel:** Durable and suitable for industrial environments, often with IP65 ratings for dust and moisture protection .
- **Polyester and PVC:** Lightweight, corrosion-resistant, and suitable for residential or outdoor use .
