

Albanian electrical distribution box qualification

Article Overview

Electrical distribution boxes in Albania must comply with national regulations, technical standards, and certification requirements to ensure safety, reliability, and legal operation.

Regulatory Framework

In Albania, the Energy Regulatory Authority (ERE) oversees electricity distribution and sets the standards for new connections, including distribution boxes. The main legal references include Law No. 43/2015 “On the Power Sector”, which regulates generation, transmission, distribution, and supply, and secondary regulations issued by ERE for technical compliance and safety . The Regulation on New Connections in the Distribution System specifies that all connection points, including distribution boxes, must meet technical and accuracy standards according to the Metering Code .

Technical Standards and Certification

Distribution boxes must adhere to national and international electrical standards to ensure safe operation and prevent power failures. Certification services, such as those provided by SGS Albania, verify that electrical installations comply with these standards. Certification typically involves:

- Inspection and testing of electrical components and wiring
- Verification of compliance with safety and operational standards
- Documentation and approval for legal operation
