

And distribution box cables

Overview

With the distribution box, centrally routed cables can be distributed 360° in all desired directions. Cables (with and without connectors) with a diameter of 1 to 15 mm can be routed, sealed and strain relieved in accordance with EN 62444. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. High-quality materials and robust product designs ensure a reliable connection, signal transmission and power. By: Thor, Senior Electrical Engineer at Weisho Electric Co. Thor specializes in R&D and overseas technical support for high-voltage cable junction boxes and other power distribution equipment.
