

Austrian ESCON connectors low-temperature resistant direct from manufacturer

Article Overview

ESCON fiber optic connectors suitable for low-temperature environments are available from manufacturers like Molex and TechOptics, with direct purchasing options in Austria.

Overview of ESCON Connectors

ESCON (Enterprise System Connection) connectors are fibre optic connectors developed for high-reliability data transmission in IBM systems and other industrial applications. They use a Retractable Shroud Duplex (RSD) design and can be supplied as terminated patchcords, pigtails, or hybrid assemblies with MT-RJ, LC, ST, or SC connectors. ESCON connectors are designed for low-loss, high-precision alignment, making them suitable for harsh environments, including low-temperature conditions.

Low-Temperature Resistance

For applications in cold environments, ESCON connectors can be selected from low-temperature rated fiber optic connectors. Manufacturers like TE Connectivity offer a portfolio of connectors specifically designed for low-temperature applications, ensuring reliable performance and minimal signal loss in extreme conditions.
