

Cable connecting the fiber optic transceiver to the router

Article Overview

A fiber optic cable connects to an Optical Network Terminal (ONT), which then links to your router via an Ethernet cable.

Required Components

To connect fiber internet to your router, you need:

- Fiber optic cable: Typically thin, yellow, with SC/APC or SC/UPC connectors, provided by your ISP .
- Optical Network Terminal (ONT): Converts light signals from the fiber into electrical signals your router can use .
- Ethernet cable: Usually Cat6 or higher, to connect the ONT to the router's WAN port .
- Compatible router: Ensure it supports high-speed fiber input and has a WAN or Internet port .

Connection Steps

- Locate the fiber wall outlet: This is where the ISP's fiber line enters your home .
- Connect the fiber optic cable to the ONT: Remove protective caps, align the connector, and insert it into the ONT's optical port .
- Power on the ONT: Wait for the status lights to stabilize, indicating a successful connection .
