

Can electrical control boxes be installed in the computer room

Article Overview

Electrical control boxes can only be installed in a computer room if they are directly associated with the operation of IT equipment and the room meets NEC and NFPA 75 requirements.

NEC and IT Room Requirements

According to Article 645 of the NEC, a computer or IT room must meet specific criteria before certain wiring and equipment rules can be applied. These include:

- A disconnecting means must be provided for the room's electrical system.
- The room must have a dedicated HVAC system.
- Only listed communications and IT equipment can be installed.
- The room must be accessible only to operators and maintainers.
- It must be separated from other building occupancies by fire-resistant construction.
- Only equipment and wiring associated with IT operations can be installed in the room .

If these conditions are not met, general NEC wiring rules apply, which may restrict the installation of control boxes not directly related to IT operations .

Placement and Safety Considerations

- Electrical control boxes must be associated with IT equipment; unrelated panels or control boxes are generally not permitted in the IT room .
