

# Cap-type junction box horizontal junction box

## Article Overview

Cap-type and horizontal junction boxes are specialized enclosures designed to protect wire connections, with cap-type boxes typically used for end-of-line or protective capping, and horizontal boxes oriented for lateral cable runs or surface mounting.

### Cap-Type Junction Boxes

Cap-type junction boxes are designed primarily to terminate or protect the ends of electrical conduits or cable runs. They often feature a removable or fixed cover (the "cap") that allows easy access for inspection, maintenance, or future expansion. These boxes are commonly used in:

- Industrial and utility applications where cable ends need protection from dust, moisture, or accidental contact .
- Outdoor or damp environments, often made from corrosion-resistant materials like stainless steel or polycarbonate to withstand harsh conditions .
- Wire splicing and branching, without housing switches or outlets, ensuring safe and organized connections . Cap-type boxes are typically surface-mounted or installed at the end of a conduit run, providing a secure enclosure that prevents exposure of live wires and reduces fire risk.
