

China receives optical fiber cables for communication

Article Overview

China has developed one of the world's largest optical fiber networks, spanning nearly 75 million kilometers by 2025, supporting high-speed, secure communication nationwide.

Network Scale and Expansion

China's optical fiber network has grown rapidly over the past decade. By the end of 2025, the total length of optical fiber cables reached 74.99 million kilometers, achieving gigabit network access in every county nationwide . In 2023 alone, nearly 4.74 million kilometers of optical fiber were installed, increasing broadband access ports to 1.14 billion, reflecting a significant expansion in connectivity . The government plans to extend 1,000 Mbps optical fiber and 5G coverage to all counties and township seats along the borders by 2025 .

Manufacturing and Technological Capabilities

China's dominance in optical fiber production is supported by a robust manufacturing ecosystem, including specialized factories for glass fiber production, coating technologies, and cable assembly . Companies like OWIRE focus on innovation and quality control, producing single-mode, multi-mode, armored, loose tube, and ribbon cables suitable for data centers, metro networks, and FTTH deployments . The industry emphasizes mass production with high quality, making Chinese optical fiber products competitive globally .
