

Coaxial Optical Cable Stripper

Article Overview

Coaxial and optical cable strippers are specialized tools designed to safely remove the outer jacket of cables, with different models tailored for coaxial or fiber optic cables.

Coaxial Cable Strippers

Coaxial cable strippers are designed to remove the outer insulation and shielding of coaxial cables such as RG58, RG59, RG6, and LMR series. They often feature adjustable blades to accommodate different stripping lengths, typically ranging from 4mm to 12mm, and may include two-blade or multi-blade designs for precise cutting without damaging the inner conductor or shielding. Popular models are available from manufacturers like Ideal, Multicomp Pro, Tempo, Huber+Suhner, and Neutrik. Some strippers also include ergonomic handles and spring-loaded mechanisms to reduce hand fatigue during repetitive use.

Fiber Optic Cable Strippers

Fiber optic strippers are specifically designed for delicate optical fibers, which require precise removal of the protective jacket without nicking the glass core. Tools like the Jonard JIC-1022 or CST-4000 can handle fiber jackets from 2mm to 3mm or larger round cables up to 40mm in diameter. These strippers often feature spring-loaded blades, adjustable cutting depth, and multiple cutting modes such as longitudinal, spiral, and circular cuts for end or mid-span stripping. High-quality fiber strippers are essential for maintaining signal integrity and preventing fiber damage during installation or splicing.

Choosing the Right Tool
