

Color of the optical module s buckle

Overview

① Multimode fiber optic module: The pull tap is black, corresponding to a wavelength of 850nm, suitable for short-distance transmission (such as less than 2km). There are various types of optical modules, and their appearances and structures are different. Dust plug Protects optical fiber connectors, optical fiber adapters, optical bores of optical. This article provides a professional guide on transceiver pull tab color codes by wavelength—spanning SFP, SFP+, CWDM, and BiDi modules—and introduces how LINK-PP standardizes color matching across its optical product lines. Many network maintenance engineers and procurement staff often ask: What does each. If you have purchased optical modules from multiple manufacturers and encountered material mixing, how can you distinguish their types?

Optical modules are usually affixed with labels covering information such as manufacturer, production date, module type, transmission distance, and serial number. Figure 15-1 shows the structure of an optical module. Figure 15-4 shows the. A buckle (1) for fixing an optical film (5), a backlight module comprising the buckle (1), and a liquid crystal display; the optical film (5) is provided with a lug (51), and is disposed on the edge (21) of an adhesive frame (2); the combination of the adhesive frame (2) and a back frame (3).
