

Cover the indoor electrical distribution box

Article Overview

You can cover an indoor electrical distribution box safely using hinged art, custom frames, or removable panels while ensuring full accessibility and code compliance.

Safety and Code Considerations

Before covering an electrical box, it is crucial to maintain accessibility for inspection, maintenance, and emergency situations. Junction boxes and main breaker panels must remain reachable without removing permanent building materials, as required by the National Electrical Code (NEC) Section 314.29 and NEC 110.26, which mandates a clear working space of at least 30 inches wide, 78 inches high, and 36 inches deep in front of the panel. Avoid placing permanent obstructions or materials inside the box, and ensure that any cover does not interfere with the operation of switches or breakers.

Creative Covering Options

-

Hinged Art or Canvas: Attach a lightweight gallery-wrapped canvas or shadow box frame to the wall with piano or cabinet hinges. Ensure the frame is slightly larger than the box (3-4 inches wider and taller) to create a deliberate design feature while allowing easy access.
