

Cuba Optical Line Terminal 10G

Article Overview

A Cuba Optical Line Terminal 10G is a high-speed fiber access device designed to support 10G PON networks, enabling downstream and upstream rates up to 10 Gbps.

Overview of 10G OLT Technology

A 10G Optical Line Terminal (OLT) is the central device in a 10 Gigabit Passive Optical Network (10G-PON), responsible for managing data transmission between the service provider's network and multiple Optical Network Units (ONUs) at customer premises . The 10G-PON family includes:

- 10G-EPON: IEEE 802.3av standard, available in asymmetric (10 Gbps downstream / 1 Gbps upstream) and symmetric (10 Gbps both ways) modes .
- XG-PON1: ITU-T standard with asymmetric 10 Gbps downstream and 2.5 Gbps upstream.
- XGS-PON: Symmetric 10 Gbps downstream and upstream, widely used for high-demand residential, business, and enterprise applications . The OLT broadcasts downstream data to all connected ONUs and manages upstream traffic using time-division multiplexing, ensuring efficient bandwidth allocation across the network .

Key Features of 10G OLTs

Modern 10G OLTs, including those compatible with Cuba optical modules, typically offer:

- High-speed connectivity: Supports 10 Gbps symmetric or asymmetric transmission for residential, SOHO, and enterprise users .
