

Customs Clearance for Cold Aisle and Outdoor Types of IoT Data Centers

Article Overview

Customs clearance for cold aisle and outdoor IoT data centers requires compliance with certification standards, accurate documentation, and integration of IoT data to streamline import processes.

Certification and Standards

For temperature-sensitive equipment in cold aisle data centers, certifications such as CNAS under GB/T 34399-2025 are increasingly recognized for faster customs clearance. Singapore's PSA platform, for example, allows refrigerated containers, temperature-controlled pallets, and sensor devices with CNAS certification to feed operating data directly into the customs system, reducing average clearance time to 2.3 hours . Ensuring that your equipment carries the relevant certification is critical for leveraging such expedited processes.

Documentation and Compliance

Customs authorities require detailed documentation for data center imports, including:

- Customs valuation: High-value IT infrastructure often involves “assists” like software or engineering services, which must be included in the declared value .
- HTS classification: Accurate Harmonized Tariff Schedule codes for servers, storage, cooling units, and IoT sensors minimize duty exposure and qualify for trade agreements .
