

D-Link PoE Switch

Article Overview

D-Link offers a range of PoE switches suitable for small to medium networks, supporting both unmanaged and smart managed options with varying port counts and power budgets.

Key Features of D-Link PoE Switches

- **Power over Ethernet (PoE/PoE+):** Most D-Link PoE switches support IEEE 802.3af/at standards, allowing devices like IP cameras, VoIP phones, and access points to receive power and data over a single Ethernet cable .
- **Port Options:** Models range from 8-port to 24-port switches, often with additional uplink ports (SFP or Gigabit) for network expansion .
- **Power Budget:** Switches like the DGS-F1026P-E provide a total PoE power budget of 250W, sufficient for multiple devices .
- **Management:** Options include unmanaged, smart managed, and fully managed switches. Smart managed switches (e.g., DGS-1100-08PV2) offer VLANs, Spanning Tree Protocol, link aggregation, IGMP snooping, and security features like Static MAC and Storm Control .
- **Ease of Use:** D-Link provides tools like Network Assistant (DNA) and D-View 7 Network Management System for easy configuration and monitoring of connected devices .
- **Energy Efficiency:** Many models feature D-Link Green technology and fanless designs for silent, energy-efficient operation .
- **Distance and Cable Compatibility:** PoE switches support Cat5e or Cat6 cables, with some models capable of powering devices up to 250 meters .
