

Distribution Box Accessories List

Article Overview

A distribution box typically includes circuit breakers, busbars, residual current devices, isolators, surge protection devices, cable glands, and optional smart monitoring modules.

Core Accessories

Circuit Breakers (MCBs): Protect circuits from overloads and short circuits by automatically disconnecting power when faults occur, ensuring safety for connected devices and wiring . Residual Current Devices (RCCBs/RCDs): Detect imbalances between live and neutral wires to prevent electric shocks and enhance safety, often installed alongside MCBs . Busbars: Copper or aluminum bars that distribute electrical current efficiently to multiple circuits, reducing wiring complexity and supporting modular expansion . Isolators: Manually operated switches that allow sections of the circuit to be safely disconnected for maintenance or emergency purposes . Surge Protection Devices (SPDs): Protect electrical equipment from transient overvoltages caused by lightning or switching surges . Cable Glands: Ensure secure and waterproof entry points for cables, maintaining insulation integrity and preventing moisture ingress .

Additional Accessories

Indication Lights: Provide visual status of mains power supply and circuit operation . Smart Modules and Sensors: Enable real-time monitoring, energy management, and IoT integration for advanced control and predictive maintenance . Labeling and Color Coding: Facilitate organized circuit identification and safe operation, especially in complex installations .
