

Distribution Box High Voltage Switch Box

Overview

Distribution boxes are mainly used for high-voltage switchgear, transformers and other electrical equipment in indoor or outdoor substations. Reliable, quality-assured solutions for industrial power distribution needs. The SRM6-12 fully insulated gas-filled ring main unit (RMU), developed by our company, has passed type tests by the National High Voltage Electrical Apparatus Testing Center. These switchgear systems are essential for ensuring the safe and efficient operation of electrical networks in industrial, commercial, and residential areas. It is the high-voltage core unit of the American box type transformer, integrating high-voltage load switches, fuses, etc., with a voltage of mostly 15kV. Safe and efficient: Vacuum circuit breakers enable fast interruption (<50ms) with 25kA short-circuit current rating. Compact footprint: Space-saving design reduces. High voltage distribution box is the control part of EV power supply, which has the functions of power distribution, current measurement, short circuit protection, charge and discharge control, pre-charging, manual emergency stop and insulation testing port.
