

Distribution boxes grouped by room

Article Overview

Distribution boxes can be organized by room to provide dedicated circuits, improve safety, and enable smart automation for lighting, heating, and other electrical systems.

Purpose of Room-Based Distribution Boxes

Grouping distribution boxes by room allows each area to have its own dedicated circuits, which improves safety, simplifies maintenance, and enables energy-efficient control. Each box acts as a hub, distributing power from the main supply to outlets, lighting, HVAC, and other devices within that room, while protecting circuits with fuses or breakers .

Types of Distribution Boxes for Room Grouping

- **Surface Mounted Boxes:** Installed on walls, ideal for retrofits or rooms where easy access is needed .
- **Flush Mounted Boxes:** Embedded into walls for a clean look, commonly used in residential or office spaces .
- **Lighting Distribution Boxes:** Dedicated to lighting circuits in a room, often integrated with DALI or KNX systems for automation .
- **Power Distribution Boxes:** Handle outlets and heavy appliances within a room, ensuring proper load management .
- **Smart DB Boxes:** Include monitoring, energy management, and remote control capabilities, suitable for automated room systems .
