

Does using a network server rack harm your health

Overview

Observe the following precautions when working on or around your IT rack system. Heavy equipment - personal injury or equipment damage might result if mishandled. To avoid hazardous conditions due to uneven mechanical loading, always install the heaviest devices in the bottom of the rack cabinet. Rack-mounted devices are not to be used as shelves or work spaces. Next would be concerns about EM non-ionizing radiation. (The potential impact of such isn't always very well known. Not only this, but your data center's personnel are also vulnerable to a number of safety hazards associated with these server racks, and the cost of lost productivity and worker injury claims is something you'll always want to avoid. The most immediate health factor for residents near data centers is the continuous noise generated by cooling systems.
