

Dubai Pallet Cable Tray Specifications

Article Overview

Pallet cable trays in Dubai are available in steel, galvanized, and powder-coated finishes, designed for heavy-duty load support, ventilation, and compliance with IEC 61537 standards.

Types and Materials

Pallet cable trays, also referred to as ladder or perforated trays, are commonly manufactured from mild steel, stainless steel (SS304/SS316L), pre-galvanized steel, or hot-dip galvanized steel to ensure durability and corrosion resistance in Dubai's harsh climate . Powder-coated finishes are also available for additional protection and aesthetic requirements . For chemical or coastal environments, GRP (Glass Reinforced Polyester) trays offer lightweight, corrosion-resistant alternatives .

Dimensions and Load Capacity

Standard pallet cable trays are designed to accommodate light, medium, and heavy electrical loads, with widths and side rail heights customizable to project requirements . Typical sizing considerations include:

- Width: 100 mm to 600 mm for standard trays, with larger widths for high-capacity installations .
- Side Rail Height: Adjustable based on load requirements, often ranging from 50 mm to 150 mm .
- Load Rating: Trays are engineered to support heavy-duty applications, including industrial plants, oil & gas facilities, and data centers .
