

Electrical Distribution Box EPD

Article Overview

An Electrical EPD Distribution Box is a low-voltage enclosure that safely distributes electrical power to multiple circuits while providing environmental product declaration (EPD) compliance for sustainability assessment.

Overview and Function

An electrical distribution box is a low-voltage enclosure designed to receive incoming power and distribute it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices . It serves as a central or decentralized hub for electrical distribution in residential, commercial, industrial, photovoltaic, or machinery applications .

Key Components

Typical internal components include:

- Phase busbars for current distribution
- Neutral and earth bars for grounding
- Protective devices like MCBs, RCDs, RCBOs, fuses, and surge protection
- Main switch or isolator for emergency disconnection
- DIN rail space for modular installation
- Cable entries and heat dissipation features to ensure safe operation
