

Electrical Distribution Box MEB

Overview

The Zw brand meb main equipotential box, measuring 300x200x120mm, is constructed from all cold-rolled steel plates. It features a variety of copper bars and brass terminals, making it suitable for applications such as lightning protection grounding and power distribution rooms. The equipotential bonding box is used in buildings to establish equipotential connections, ensuring that all exposed conductive parts of electrical and other equipment, along with metallic conductive components within the structure, are connected via conductors to either artificial or natural. These Distribution Boxes enable decentralized installation of the electronics close to the load. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS. Wieland is your. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The Eaton's MEB (metal-enclosed breaker) switchgear assemblies consist of a single-high drawout vacuum circuit breaker (Type VCP-W) in a metal-enclosed cabinet.
