

Fiber Optic Cable Installation in Kazakhstan

Article Overview

Kazakhstan is establishing a high-capacity fiber-optic link to Azerbaijan via the Trans-Caspian Cable, enhancing connectivity between Europe and Asia.

Trans-Caspian Fiber-Optic Cable Project

Kazakhstan is participating in the Trans-Caspian fiber-optic cable project, a key component of the Digital Silk Way initiative led by NEQSOL Holding and implemented through AzerTelecom in partnership with Kazakhtelecom . The project involves laying a 380-kilometer submarine cable along the Caspian Sea floor, connecting Aktau, Kazakhstan, to Sumgayit, Azerbaijan. The cable is designed to provide ultra-high-speed, low-latency connectivity with a data transmission capacity of up to 400 terabits per second (Tbps), creating a direct digital corridor between Europe and Central/South Asia . Construction is currently underway, with the official launch scheduled for the third quarter of 2026 . The project aims to reduce latency, improve internet quality, and support international data transit, while also attracting global hyperscalers and enhancing regional digital resilience . The initiative is expected to strengthen Kazakhstan's role as a digital gateway between Europe and Asia.
