

Fiber Optic Panel IK10

Overview

These ratings, defined by the IEC 62262 standard, indicate how well a display can resist mechanical impacts in harsh environments. An IK10 display offers the highest protection level, withstanding impacts up to 20 joules, making it ideal for vandal-proof and outdoor HMI. Therefore we've designed the brand-new Fiber Optic Boxes MDB to simplify deployment, maintenance and control your costs. The boxes can be configured to address a wide range of fiber optic splice and/or connectivity applications for PON, GPON and 5G networks. This closure integrates fiber splicing, storage, and cable management. The new MDB M is a durable fiber optic box, designed with the highly flexible FibeRoad™ System inside. The engineered design provides IP65 protection from water /. The Fiber Access Terminal accommodates up to 8 subscribers. Advanced Design:. When designing rugged and reliable industrial displays, two of the most important impact protection standards to consider are IK10 display and IK09 display ratings.
