

Fiber optic cable with built-in router

Article Overview

Fiber optic routers combine high-speed fiber connectivity with integrated routing, enabling seamless internet access without separate devices.

Overview

A fiber optic router is a device that either connects directly to your fiber optic line or works with an Optical Network Terminal (ONT) to provide internet access and Wi-Fi coverage. While most fiber connections require an ONT to convert optical signals into electrical signals, some modern routers include built-in fiber ports or SFP/SFP+ modules, allowing direct fiber input and eliminating the need for a separate modem .

Key Features

- **High-Speed Connectivity:** Supports gigabit or multi-gigabit speeds to fully utilize fiber internet, often exceeding 1 Gbps .
- **Wi-Fi Standards:** Many fiber routers now support Wi-Fi 6 or Wi-Fi 7, offering faster throughput, lower latency, and better handling of multiple devices .
- **Multiple Ports:** Includes LAN ports for wired devices and sometimes 2.5G or 10G WAN/LAN ports for future-proofing .
- **Smart Features:** AI WAN detection, Quality of Service (QoS), parental controls, and compatibility with voice assistants like Alexa .

Recommended Models

- **ASUS RT-BE86U:** Wi-Fi 7, quad-core processor, 10G WAN/LAN support, ideal for heavy streaming and gaming .
