

Fiber optic patch cord drop cable fiber optic cable

Article Overview

Fiber optic patch cords and drop cables are pre-terminated fiber cables used to connect network equipment, with drop cables specifically designed for FTTH applications to link outdoor networks to indoor devices.

Overview

Fiber optic patch cords (also called fiber jumpers) are short, pre-terminated cables used to connect optical devices such as switches, routers, and PON boxes. They are available in single-mode or multimode, with simplex or duplex configurations, and support low-loss, stable transmission for both short and long distances . Drop cables, also known as FTTH drop patch cords, are specialized patch cords designed to connect the outdoor fiber network to the end-user's indoor equipment. They are commonly used in Fiber-to-the-Home (FTTH) deployments and are engineered for both indoor and outdoor use, featuring UV resistance, weatherproofing, and bend-insensitive fibers .

Types and Structures

Drop cables come in various structures to suit different installation environments:

- Flat drop cable: Flexible and easy to route through narrow spaces or conduits .
- Round drop cable: Offers durability and is suitable for both indoor and outdoor applications .
