

Fiber optic router optical signal red

Article Overview

A red LOS (Loss of Signal) light on your fiber optic router indicates that the router or ONT is not receiving a proper optical signal from your ISP.

What the Red LOS Light Means

The LOS light on a fiber optic router or Optical Network Terminal (ONT) signals the status of the optical connection. When it turns red or blinks red, it indicates a loss or interruption of the fiber signal, preventing your router from communicating with your Internet Service Provider (ISP) (). This is different from WiFi issues; the problem is with the optical signal itself.

Common Causes

- **Fiber Cable Damage:** Cuts, sharp bends, or crushed fiber cables can disrupt the signal ().
- **Loose or Improper Connections:** The fiber cable may not be fully inserted into the ONT or router port ().
- **Service Outage:** ISP maintenance or local network issues can temporarily interrupt the signal ().
- **Faulty Router or ONT:** Hardware malfunction can prevent signal reception ().
- **Power Issues:** Inconsistent power supply to the router or ONT may cause the LOS light to turn red ().

Troubleshooting Steps

- **Check for ISP Outages:** Visit your ISP's website or social media for outage updates.
