

Fire control lines run through cable trays

Overview

Direct Low Pressure (DLP) fire suppression systems offer a proactive solution for protecting cable trays and trenches. Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability. This document outlines the key requirements for cable tray layout, installation, and fireproofing in industrial and commercial environments. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with. The large number of cable support systems run concealed in cable tunnels behind wall and floor coverings. Electrical lines can ignite themselves due to overheating or a short-circuit or they can be set alight by the external influence of fire or heat. * Two (2) sticks of moldable putty (part number FSP-MPS) are also needed for each opening. UL Listed Systems Concrete Wall - C-AJ-4056 3 HR F-Rating, 3/4 HR T-Rating Gypsum. ProReact Linear Heat Detection (LHD) offers a proven solution.
