

Franchise Cold Connector 4-core

Article Overview

A 4-core cold connector is a pre-stretched elastomeric termination or joint that provides reliable insulation and sealing for medium-voltage power cables without the need for heat during installation.

Overview

A 4-core cold connector is designed to terminate or join four individual conductors in medium-voltage power cables, typically ranging from 1 kV up to 35 kV depending on the product and manufacturer. These connectors use cold shrink technology, where a pre-stretched silicone or EPDM rubber sleeve is placed over a removable support core. Once positioned on the cable, the core is removed, allowing the rubber to recover and tightly seal the cable conductors. This method eliminates the need for heat sources, making installation safer and faster, especially in confined or hazardous areas.

Key Features

- **Voltage Range:** Suitable for medium-voltage applications, often from 1 kV to 35 kV.
- **Material:** Made from elastomeric materials such as silicone or EPDM, providing flexibility, UV resistance, and long-term durability.
- **Environmental Protection:** Offers excellent sealing against water, humidity, and contaminants, making it suitable for indoor, outdoor, underground, or direct-buried installations.
- **Ease of Installation:** No heat or special tools required; the connector is simply slid onto the cable and the support core removed.
