

Gigabit fiber optic but the router is very slow

Overview

Fiber internet is primarily slow due to Wi-Fi signal interference, outdated router hardware, or local network bottlenecks like low-tier Ethernet cables. In this guide, we'll walk you through a series of simple steps that can help you identify and resolve the most frequent culprits behind slow fiber internet speeds so you can get back to enjoying your online activities without interruptions. If your fiber optic internet isn't performing as well as. Many factors beyond the fiber optic cable itself can impact speeds, making troubleshooting essential to unlocking the true potential of your internet connection. Although the fiber line itself offers massive bandwidth, environmental factors and hardware limitations often prevent devices from reaching. Or use the ISP supplied router for a bit?

Ether can eliminate your router as the issue. I'd run some continuous ping tests to start narrowing things down: Your Router ISP Gateway/Router Major website or DNS (anything that will leave the ISP network. You can fix most of these issues yourself; some only take a few minutes—we'll start with eight of the most common.
