

Height and dimensions of the distribution box

Article Overview

Distribution boxes typically have heights ranging from 75 mm to 140 mm, with recommended mounting heights between 1 m and 1.8 m for residential installations.

Physical Height of Distribution Boxes

The height of distribution boxes varies depending on the series and type. For example:

- Plastic distribution boxes (HA, HK, LGD series): 75–140 mm in height, with lengths from 100–415 mm and widths from 105–323 mm .
- MB-ABC series: Heights are generally 95 mm, with lengths ranging from 200–328 mm and widths around 172–174 mm . These dimensions are important for selecting a box that fits the available space and accommodates the required number of ways (outlets) for electrical circuits .

Recommended Mounting Height

For safe and convenient access, distribution boxes should be mounted at a height that allows easy operation and maintenance:

- Residential installations: 1 m to 1.8 m from the floor, with 1.3 m suggested for elderly or handicapped users .
- Wall-mounted boxes: 4.5 to 5.5 feet (1.4–1.7 m) is ideal to avoid bending or stretching excessively .
