

High-precision integrated container rack

Overview

Wafer container racks are not passive shelving units—they are precision-engineered systems that must maintain electrostatic discharge (ESD) safety, minimize particle generation, and seamlessly integrate with automated material handling systems (AMHS). RackBot System Eco is a versatile and scalable “goods-to-person” solution designed for high efficiency and flexibility in warehouse operations. The automated storage and provision system increases storage density and order throughput while significantly reducing labor costs. System 1 leverages advanced. The 100% Automated Fulfillment HaiPick System 3 is the most dense Automated Warehouse Fulfillment System with exceptional order processing speed. The Automated HaiPick System 3 is a state-of-the-art robotic warehouse solution designed to maximize space utilization while delivering exceptionally high. Modul-System's container solutions combine our racking systems with various types of containers to suit your specific requirements. The containers are ideal for. AgRACK glass transportation racks are engineered for maximum container density while ensuring product safety—solving the costly challenge of underutilized space across 20ft and 40ft containers.
