

# Home Multimode Fiber Optic Testing

## Overview

This is your "QuickStart" guide to testing fiber optic cable plants, patchcords and communications equipment with a fiber optic light source and power meter. We'll give you the basic information you need and provide some printable references. Take an LED flashlight and shine the light into one of the fiber. Fiber Optic Testing is used to evaluate the performance of fiber optic components, cable plants and systems. As the components like fiber, connectors, splices, LED or laser sources, detectors and receivers are being developed, testing confirms their performance specifications and helps. MultiFiber Pro Optical Power Meter and Source is the first fiber tester that can certify MPO fiber trunks without the use of fan-out cords. Modal distribution in multimode fiber is very important to measurement. If you're working with single-mode and multimode fibres, testing them with an Optical Time Domain Reflectometer (OTDR) is essential for ensuring your network is up to standard.
