

How much does 1 meter of optical fiber cable weigh

Article Overview

The weight of a meter of optical fiber cable typically ranges from 0.01 kg to 0.2 kg, depending on the type and construction.

Typical Weight Ranges

- **Indoor Fiber Optic Cables:** These are lighter due to minimal protective layers, weighing approximately 10–30 kg per kilometer, which translates to 0.01–0.03 kg per meter .
- **Outdoor Fiber Optic Cables:** With additional protective layers for environmental resistance, these cables weigh 60–200 kg per kilometer, or roughly 0.06–0.2 kg per meter .
- **Armored Fiber Optic Cables:** Featuring metal armoring for enhanced protection, these can exceed 200 kg per kilometer, meaning 0.2 kg or more per meter .
- **Ultra-Lightweight Aerial Cables:** Designed for aerial deployment, these specialized cables can be significantly lighter, often well below 0.05 kg per meter, while maintaining tensile strength and durability .

Factors Affecting Cable Weight

- **Cable Construction:** The number of fibers, type of buffer tubes, and presence of armoring or water-blocking materials influence weight.
- **Material Density:** The density of the protective jackets, fillers, and strength members contributes to the overall mass.
