

How much does a SMU distribution box cost

Article Overview

The cost of an SMU distribution box typically ranges from \$2,000 to \$6,000, depending on configuration, voltage rating, and supplier.

SMU distribution boxes, such as the SMU-20 Fuse Units used in outdoor distribution feeders and substations, are designed for reliable protection of transformers and capacitors, with features like breathable construction and nondamageable fusible elements for long-term performance . Pricing varies based on factors including:

- Voltage rating: Common ratings are 14.4 kV to 34.5 kV, with higher voltage units generally costing more .
- Configuration: Options include pole-top or station mounting, loadbreak capability, and dropout indicators, which can affect cost .
- Supplier and region: Prices differ depending on manufacturer, distributor, and shipping logistics. For budgeting purposes, standard SMU distribution boxes are often in the \$2,000–\$6,000 range, while specialized or higher-capacity units may exceed this range. Installation, labor, and additional accessories (like loadbreak tools or protective enclosures) are typically extra costs. To obtain an exact price, it is recommended to contact suppliers directly, such as S&C Electric, and provide specifications including voltage, mounting type, and any optional features required for your application . This ensures the quote reflects the precise configuration and local market conditions.
