

How much does an 1800-meter optical cable weigh

Article Overview

The weight of an 1800-meter fiber optic cable can range from approximately 18 kg to over 360 kg, depending on the cable type and construction.

Estimated Weight by Cable Type

- Indoor fiber optic cable: Typically weighs 10–30 kg per kilometer. For 1.8 km, this translates to 18–54 kg .
- Outdoor fiber optic cable: Heavier due to protective layers, usually 60–200 kg per kilometer, giving a total of 108–360 kg for 1.8 km .
- Armored fiber optic cable: Includes metal armoring for extra protection, often exceeding 200 kg per kilometer, so 1.8 km could weigh 360 kg or more .

Factors Affecting Cable Weight

- Construction materials: The type of core, strength members, and outer jacket influence weight.
- Cable design: Armored cables or those with multiple cores are heavier.
- Installation environment: Outdoor cables may include water-blocking gels or additional sheathing, increasing weight.

Practical Considerations

- Support structures: Heavier cables require stronger poles, towers, or conduits.
