

How much does it cost to seal up cable trays

Article Overview

The cost of sealing cable trays depends on the type of firestop system, cable tray size, and installation complexity, with modular firestop systems and intumescent pillows being common solutions.

Types of Cable Tray Sealing Systems

- **Modular Firestop Systems (e.g., FIRSTO)** FIRSTO systems are designed for multi-cable and cable tray penetrations in fire-rated walls and floors. They are modular, easy to install, and allow for future cable additions or removals. These systems provide high fire and smoke protection and can withstand mechanical loads, making them suitable for industrial and commercial applications .
- **Intumescent Fireproof Pillows (e.g., AF Bags)** AF Bags are certified under EN 1366-3 for up to EI 240 fire resistance. They consist of intumescent materials inside a non-combustible fiberglass casing and are suitable for small to large cable penetrations. They are easy to reposition and maintain, and their installation depth is typically 120 mm for cables up to 21 mm in diameter .
- **Preformed Firestop Blocks (e.g., CFS-BL)** Preformed blocks or cushions are another option for sealing cable tray penetrations. They are available in various sizes and materials, and prices vary depending on the region and certification requirements .

Factors Affecting Cost

- **Cable Tray Size and Number of Cables:** Larger trays or multiple cables require more sealing material and labor.
