

How much does the aluminum sheath for optical fiber cable cost

Article Overview

Aluminum-armored fiber optic cables typically cost between \$0.30 and \$1.50 per meter, depending on fiber count, cable type, and environmental rating.

Price Range

Aluminum sheaths are commonly used in armored fiber optic cables to provide mechanical protection and flexibility during installation, especially for outdoor, direct burial, or industrial applications. The cost of these cables varies based on several factors:

- **Cable Type and Fiber Count:** Simplex or duplex indoor cables are cheaper (\$0.05–\$0.30 per meter), while single-mode or multimode outdoor cables with aluminum armor range from \$0.30 to \$1.50 per meter. Higher fiber counts (e.g., 24-core or 96-core) increase the price proportionally.
- **Construction and Environmental Rating:** Aluminum interlocking armor offers flexibility and protection, making it slightly more expensive than standard PVC or PE jackets. Direct-burial or plenum-rated armored cables are at the higher end of the range.
- **Installation Considerations:** While the material cost is \$0.30–\$1.50 per meter, total project costs may include labor, trenching, conduit, and connectors, which can significantly increase the overall expense.
