

How to connect a router to the fiber optic internet connection

Article Overview

To connect a router to fiber optic internet, you need an Optical Network Terminal (ONT) to convert the fiber signal, then link it to your router via Ethernet for full network access.

Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT): Provided by your ISP, this device converts the incoming fiber optic light signals into electrical signals your router can use .
- Fiber optic cable: Usually a thin yellow cable with SC/APC or SC/UPC connectors .
- Router: Ensure it supports high-speed connections and has a WAN or SFP port compatible with fiber input .
- Ethernet cable: To connect the ONT to your router .

Step 2: Install the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home .
- Connect the fiber optic cable from the wall outlet to the ONT's optical port, handling the connector carefully to avoid dirt or damage .
- Power on the ONT and wait for the status lights to stabilize, which may take a few minutes .

Step 3: Connect the ONT to Your Router
