

How to connect an F660 fiber optic router to broadband

Article Overview

To connect your ZTE F660 router to broadband, first connect the fiber optic cable to the SC/APC port, then connect your devices via Ethernet or Wi-Fi, and finally power on the router to establish the internet connection.

Step 1: Prepare the Router and Cables

- Ensure the power adapter supplied with the F660 is available and unplugged.
- Locate the fiber optic drop cable from your ISP.
- Identify the SC/APC fiber port on the F660 (usually with a green latch) and the Ethernet ports for connecting computers or routers .

Step 2: Connect the Fiber Optic Cable

- Insert the single-mode fiber drop cable from your ISP into the SC/APC port on the F660.
- Make sure the connector is angled physical contact (APC) to minimize signal reflection.
- Avoid bending the fiber sharply to prevent damage .

Step 3: Connect Devices

- Use a Gigabit Ethernet port to connect a computer or secondary router for internet access.
