

How to connect fiber optic cable to a gigabit router

Article Overview

To connect a gigabit router to a fiber optic cable, you need an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet, then link it to your router's WAN port using a high-quality Ethernet cable.

Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, it converts the incoming fiber optic signal into an electrical signal your router can use .
- Fiber Optic Cable: Usually pre-terminated with SC/APC or SC/UPC connectors, supplied by your ISP .
- Gigabit Router: Ensure it supports gigabit speeds and has a WAN port for Ethernet input .
- Ethernet Cable: Cat5e, Cat6, or Cat6a recommended to maintain full gigabit speeds .

Step-by-Step Connection

- Locate the Fiber Termination Point: This is the wall outlet or fiber terminal where the ISP's fiber line enters your home .
- Connect Fiber to ONT: Carefully insert the fiber optic cable into the ONT's designated port. Handle the connector by its plastic housing to avoid damage, and ensure it clicks securely .
