

# How to connect fiber optic cables for splicing through a skylight

## Article Overview

Fiber optic cables can be spliced safely in a skylight by following proper preparation, alignment, and safety procedures using either fusion or mechanical splicing methods.

### Safety First

Before starting, ensure all light sources are off to prevent eye damage, and wear laser safety glasses if necessary. Dispose of any glass shards in a designated container to avoid injury, especially in a confined or elevated space like a skylight. Make sure the skylight area is stable and secure to prevent falls or accidental cable damage.

### Tools and Equipment

For splicing, you will need:

- Fiber fusion splicer (for permanent, low-loss connections) or mechanical splice kit (for temporary or quick connections)
- Fiber cleaver to create precise 90-degree end faces
- Precision fiber stripper to remove the protective coating without nicking the fiber
- Lint-free wipes and 99%+ isopropyl alcohol for cleaning the fiber ends
- Splice protectors to shield the joint after splicing

### Preparation Steps
