

How to connect hard wires to a distribution box

Article Overview

Connecting hard wires to a distribution box requires careful sequencing: first secure the main power, then connect the incoming phase and neutral to the main MCB, followed by wiring the RCCB, MCBs, neutral link, and earth connections.

Safety First

Before starting, turn off the main power supply to prevent electric shock. Use insulated tools and wear protective gloves. Ensure the distribution box is securely mounted at an accessible height and the installation area is free of obstructions .

Step-by-Step Wiring Procedure

- Identify Input and Output Wires
 - The incoming live (phase) wire is usually brown or red.
 - The neutral wire is typically blue.
 - The earth wire is green/yellow.
- Connect the Main Supply
 - Attach the phase and neutral wires from the main supply to the input terminals of the main MCB (double-pole for single-phase systems) in the distribution box .
 - If using a DP MCB, connect both phase and neutral; for single-pole MCBs, only the phase is connected.
- Wire the RCCB
- Connect the output of the main MCB to the input of the RCCB.
