

How to connect the embedded parts of the cable tray

Overview

Splice plates are the most widely used method for connecting cable tray sections in straight runs. We fix them with nuts and bolts through the holes in the plate and the tray sides. Choosing the right one depends on project conditions, load requirements, and future maintenance needs. Mark the cable tray route based on your electrical cable tray design and site. Cable tray installation implies the construction of an electric road that will be safe. For licensed electricians, mastering these principles is essential. To meet this requirement, Hubbell ® UL classified splices or No-splice supports must be used to join sections of basket tray together.
